

A Dialogue Dataset for Hate Speech Countering

Women getting into the labour market has caused the downfall of Western civilisation, they should be at home raising children. Abandoning traditional roles is the ruin of society.

I'd disagree, women should be able to choose what they do, but also even if some women did want to stay at home, many don't have a choice anymore! It's impossible to support a family on 1 wage now.

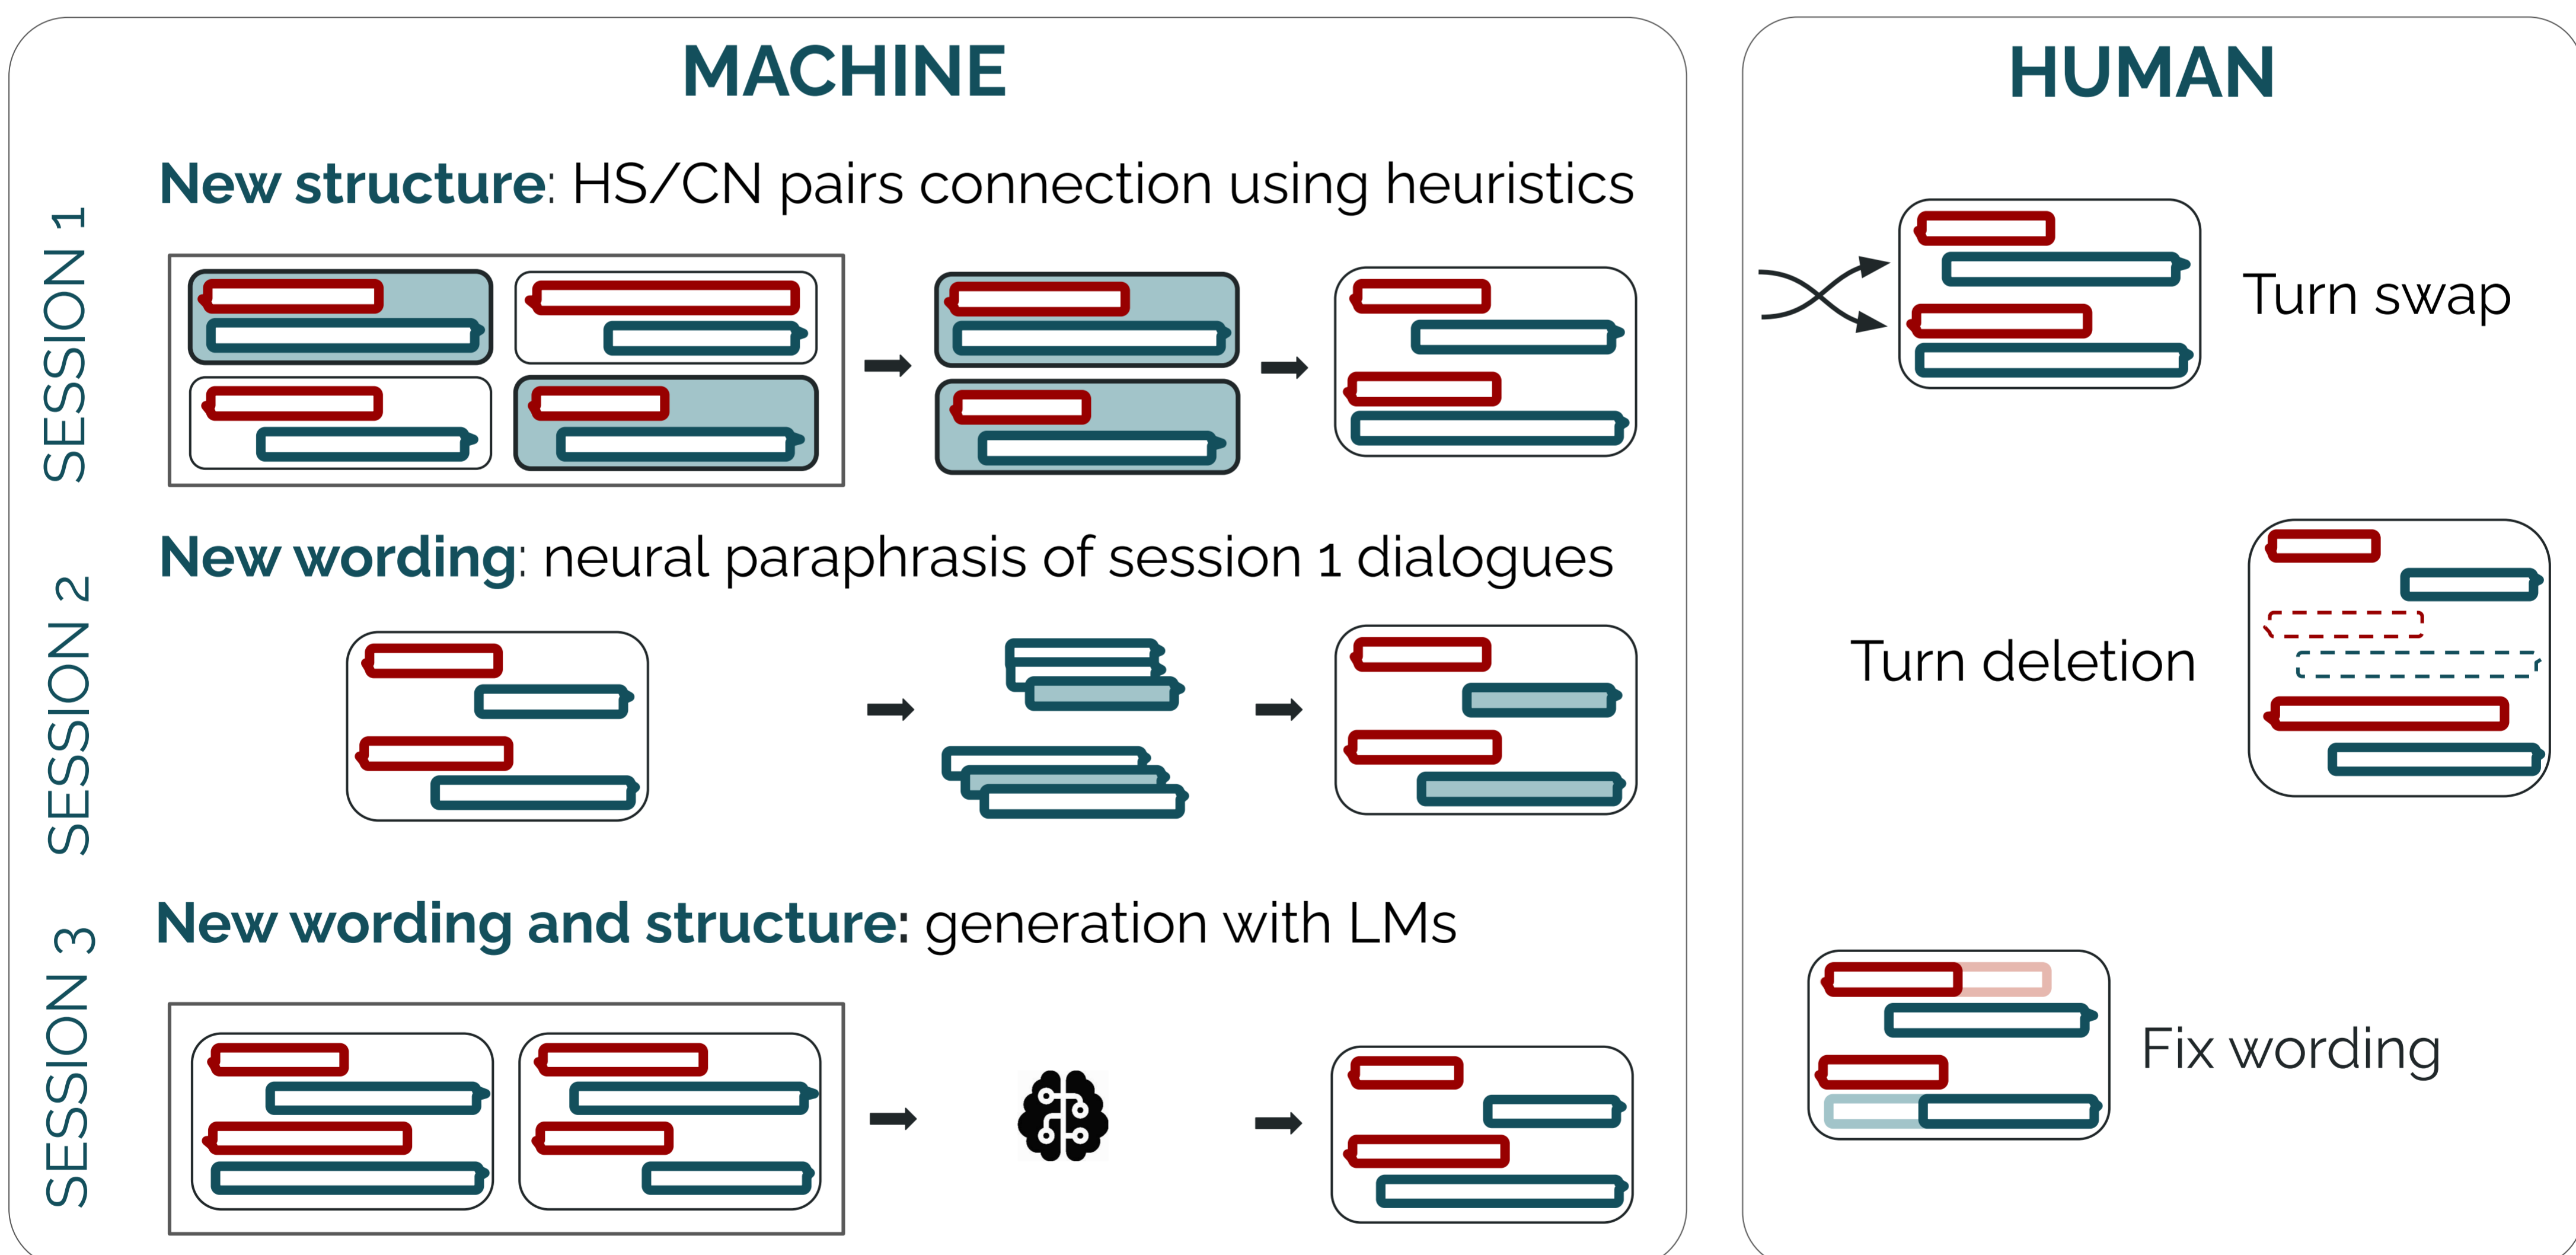

Oh really? It didn't used to be impossible, it used to be the norm, what's changed?

The cost of living has increased rapidly whilst wages have stagnated over the last few decades. This means that whilst 1 full time wage used to support a family, now with proportionately higher prices for things like food and housing, this isn't possible.

Counter-Narratives (CN) are effective for fighting online Hate Speech (HS). We collect HS/CN dialogues using several hybrid strategies (machine + human).

Session comparison

Session 1: requires the **least post-editing**

Session 2: lowest repetitiveness but **lowest novelty**

Session 3: better for a **more creative** data collection

Dataset description

3059 dialogues

16625 turns

6 targets
